

Neuronchain is the World's fastest 4th generation blockchain on Mainnet

# NEURONCHAIN

Decentralized P2P Financial Network

NeuronChain is a highly scalable, decentralized P2P financial network that enables regulatory aligned fiat and crypto transactions.

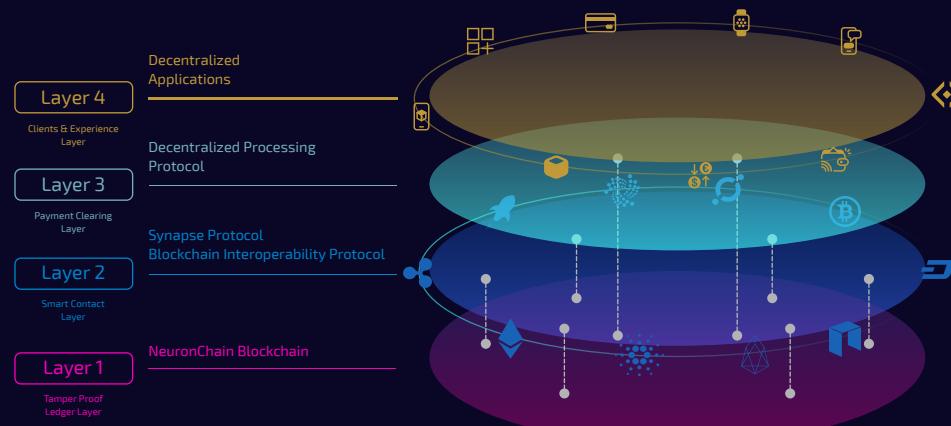

## Our Vision

At NeuronChain, we believe that every person on this planet should be free to control their capital however they choose, in complete privacy. NeuronChain's blockchain empowers the banked to break free of today's over complex, burdensome and expensive centralized financial system, and the unbanked for the first time in history can enjoy a decentralized and inexpensive

banking experience at the touch of a button and enter the world of true financial inclusion. With an enticing value proposition to both, we will be able to bring these previously unconnected individuals into one financial network, and hence unleash a new era of financial inclusion, free trade and prosperity.

## Network Architecture

NeuronChain's robust multilayer architecture decentralizes the transfer of fiat money through a network of fiat liquidity providers and seamlessly connects fiat based payment systems with blockchain networks.

## The NeuronChain Ledger

NeuronChain is already an active platform which is highly advanced in terms of speed, the level of decentralization and energy efficiency. NeuronChain's blockchain capabilities harmoniously ties the transaction needs for the ever-changing "high speed" global markets and our vision for decentralized free markets.

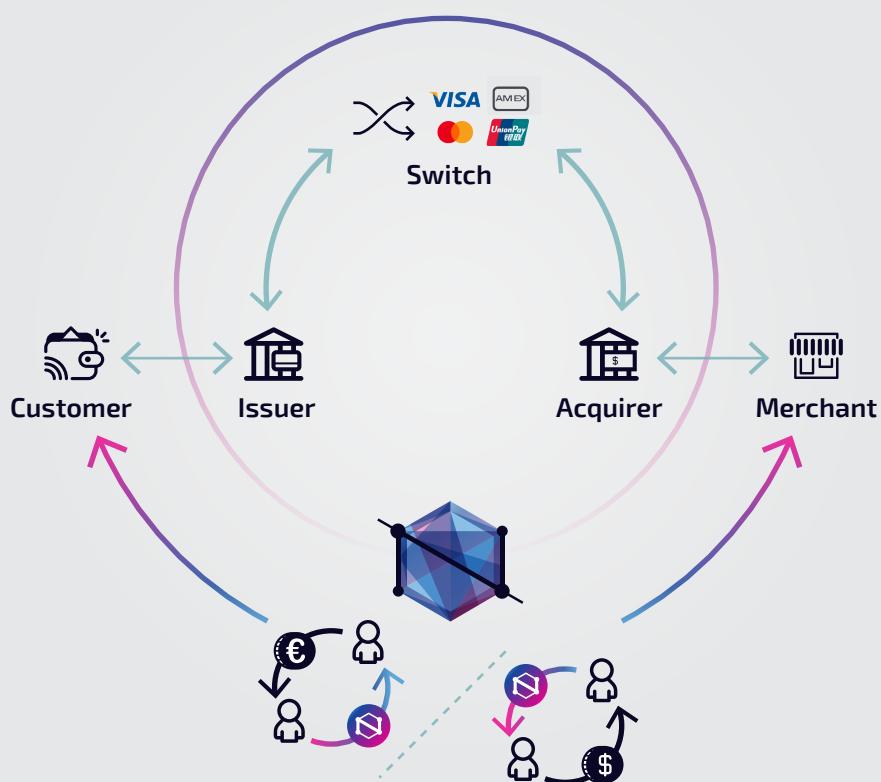

# The Synapse Protocol

NeuronChain's Synapse Protocol allows network participants to deploy scalable on- and offchain smart contracts in fiat and cryptocurrencies and design their own crypto economic protocols on top of NeuronChain.

## Decentralized Processing Protocol

NeuronChain's Decentralized Processing Protocol revolutionizes existing payment systems by disintermediation of the current centralized structures and clearing processes. It allows merchants to set the rules for acquirers and issuers to offer payment solutions at zero infrastructure costs.

## dApps and dCards

NeuronChain is for everyone who has a vision to build their own decentralized financial services systems. Any organisation, be it in B2B or B2C or a challenger bank would have the unique capability to offer fiat and cryptocurrency based banking services to their customers through NeuronChain. In addition to this, as a means of facilitating B2B adoption, we will offer free API's to integrate with any existing payment system. Additionally to our infrastructure services for third party developers we are on track developing the first consumer dApps on top of NeuronChain:

### Launched products:

#### NeuronChain | The Blockchain

A blockchain based on the revolutionary DPoL and TaPoS consensus mechanism with a native transaction speed of 100.000 tps.

#### NeuronEx | Decentralized P2P Fiat/Crypto Exchange

An instant, permissionless fiat/crypto exchange with cash settlements to serve those who need to exchange their fiat to crypto and crypto to fiat.

### Products under development:

#### Neuron Wallet | Decentralized P2P Fiat/ Crypto Exchange

The first wallet which matches fiat with crypto to serve the retail investors needs for fiat/fiat, fiat/crypto or crypto/crypto exchange pairs.

#### Neuron dCards | Decentralized P2P Fiat/ Crypto Plastic Cards

The world's first completely decentralized, contactless plastic card which operate independently from any centralized systems. Neuron dCards cannot be shut off or censored.

# Achieving Regulatory Compliance

NeuronChain bridges fiat and crypto through a P2P network of exchange commissioners (Agents). Agents can even operate on the ground by accepting cash for which they will receive an attractive exchange commission (1/3rd of the commission).

## Our Team

We are a group of highly driven individuals with decades of experience in banking, business development and building products.

Once fiat is converted into NER, it can freely travel to any part of the world without the need of being exchanged into another fiat currency. As the fiat never leaves the border of any country, it adheres to national local compliant regulations.

We are actively supported by our advisors with deep links to the regulatory environment as well as experience with building and scaling billion dollar businesses.

# Our Roadmap

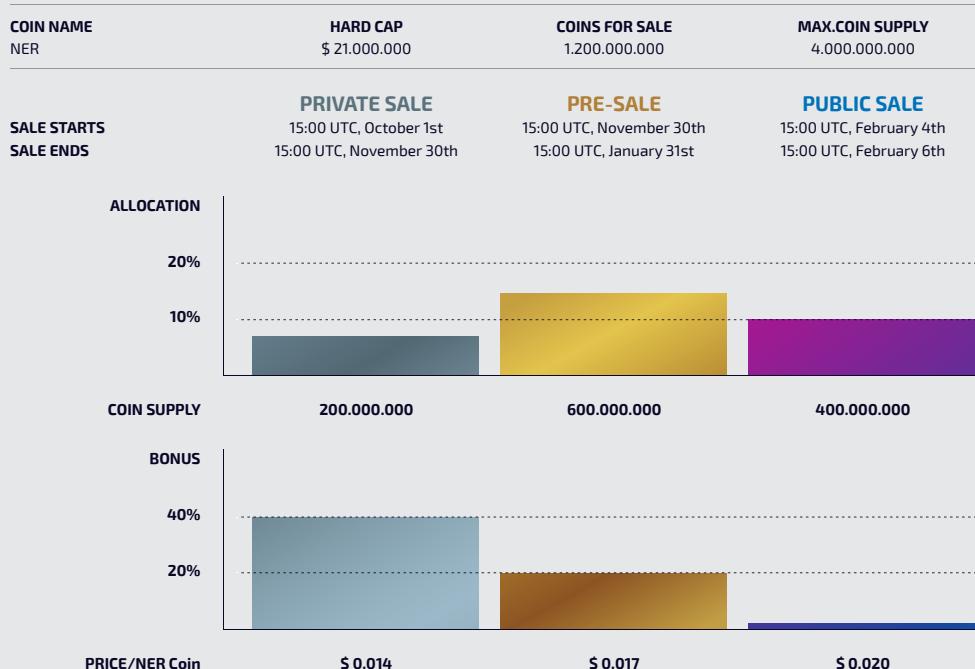

With our mainnet launch accomplished and the first dApps on the horizon, we are ready for a full roll-out and mass adoption.

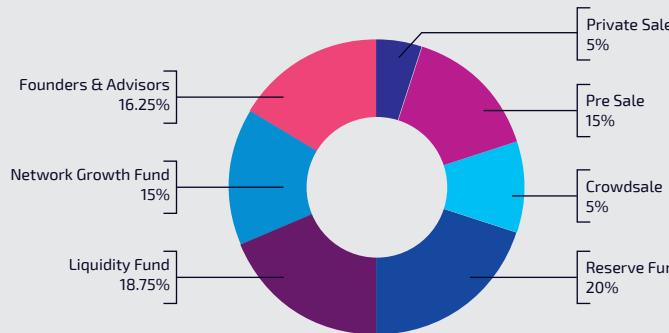

\* The roadmap is a living document which can be subjected to change. Since, there could be unexpected delays for reasons beyond our control, the projected dates will be updated when we are closer to the milestone completion.

## Coin Sale

NeuronChain's Coin Sale is structured in three phases - private sale, pre-sale, and public sale. Each phase has a bonus amount the buyer will get in addition to the NER Coins bought.

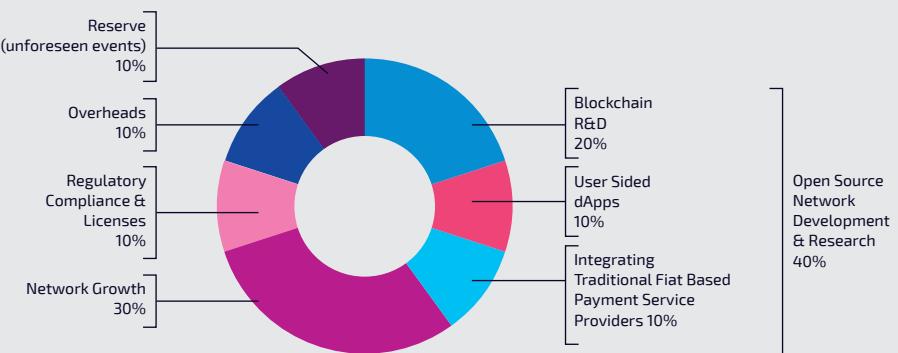

## Coin Distribution

## Allocation of Funds

We intend to use the funds to 1) further develop NeuronChain Mainnet towards smart contract capabilities, 2) Drive adoption of our first consumer dApps and 3) Integrate NeuronChain with any existing payment platform to also drive adoption by businesses of any kind.

We will further deploy funds to meet regulatory compliance and acquire licenses (e.g. EMI license). 10% of the funds will be kept as a reserve for unforeseen events.

## Questions?

Let's get in touch!

For further information about NEURON please get in touch with our co-founder Alexander Pekar.
